

Platform Architecture & Feature Distribution

Overview

DocLogBook shall provide a multi-platform experience where each platform is optimized for its primary use case.

- **Web Application:** Practice management, analytics, dashboards, reports, and financial insights.
 - **Mobile Application (Android & iOS):** Daily documentation, AI assistant, voice-based log creation, chatbot, and quick access to records.
-

1. Web Application

The Web Portal shall serve as the primary platform for analytics, reporting, and practice management.

Features

Dashboard

- Practice Overview
- Monthly Performance
- Yearly Performance
- Revenue Summary
- OPD Summary
- Surgery Summary
- Pending Payments
- Outstanding Amount
- Collection Rate

Analytics

- OPD Analytics
- Surgery Analytics
- Revenue Analytics
- Hospital-wise Analytics
- Procedure-wise Analytics
- Payment Analytics
- Insurance/TPA Analytics
- Growth Analytics
- Productivity Analytics

AI Insights

The web dashboard shall display automatically generated insights, such as:

- Surgeries increased by 18% compared to the previous quarter.
- Revenue increased by 15% this month.
- Hospital B has the fastest payment turnaround.
- Hospital C accounts for 42% of outstanding payments.
- Friday is your busiest surgery day.
- Your CV completeness is 92%.
- At your current pace, you will complete 612 surgeries this year.

Reports

- Monthly Reports
- Annual Reports
- Revenue Reports
- Hospital Reports
- Procedure Reports
- Payment Reports
- Documentation Reports

Charts

- Hospital-wise Revenue
- Hospital-wise OPD
- Hospital-wise Surgeries
- Procedure Distribution
- Revenue Distribution
- Insurance/TPA Distribution
- Pending Payments
- Growth Trends
- Revenue Trends
- Surgery Trends
- OPD Trends

Export

- PDF
- Microsoft Word
- Excel

2. Mobile Application

The Mobile Application shall be designed for doctors to quickly capture information during clinical practice using AI.

AI Assistant

- AI-powered conversational assistant
- Voice-based interaction
- Context-aware conversations
- Personalized using the doctor's own records

AI Log Creation

Doctors can create OPD or Surgery logs through natural conversation.

The AI shall:

- Understand spoken English.
- Ask follow-up questions when required.
- Auto-fill structured fields.
- Generate complete logs.
- Display a preview before saving.
- Save only after doctor confirmation.

Voice-to-Text

Separate from the AI Assistant.

Features:

- English speech recognition
- Medical terminology support
- Editable transcript
- Copy and save

AI Chatbot

The chatbot shall answer questions using the doctor's own data.

Example queries:

- Show my surgeries this month.
- Which hospital generated maximum revenue?
- Show all PCNL cases.
- Find surgeries performed at Apollo Hospital.
- Show pending payments.
- Show OPDs last week.

The chatbot shall respond with:

- Text summaries
- Lists
- Quick statistics

AI Search

Doctors shall search records using natural language instead of manual filters.

Example queries:

- Show RIRS surgeries.
- Show surgeries from January.
- Find patients above 60 years.
- Show surgeries without complications.
- Show pending payments older than 90 days.

The AI shall automatically identify filters and retrieve matching records.

AI Personalize Persona

The AI shall continuously analyze the doctor's data and deliver personalized recommendations on the mobile app.

Examples:

- Hospital B pays within 18 days. Consider scheduling more surgeries there.
- Hospital C has delayed payments. Follow up on outstanding invoices.
- Friday is your busiest surgery day. Consider opening an additional OT slot.
- Adding one more OPD clinic each week could increase your annual consultations.
- Five surgery logs are incomplete.
- Your documentation completeness has improved to 96%.

Recommendations shall include contextual action buttons such as:

- View Details
 - Open Hospital
 - Complete Log
 - View Pending Payments
 - Contact Billing Team
-

3. Platform Synchronization

All data shall be synchronized securely between the mobile and web applications.

- Logs created on the mobile app shall be immediately available on the web dashboard.
 - Analytics generated on the web shall use the latest synchronized data.
 - AI recommendations on mobile shall be based on the same centralized database.
 - User preferences and settings shall remain consistent across platforms.
-

4. Design Philosophy

Web: Designed for deep analysis, reporting, and practice management with comprehensive dashboards and visualizations.

Mobile: Designed for speed, mobility, and AI-assisted workflows, enabling doctors to create records, ask questions, receive recommendations, and manage their practice efficiently while on the move.
